Characterization due to Stegenga '80: Condition involving the logarithmic capacity of their boundary values.

The multipliers of H^2 is H^{∞} , but the multipliers of \mathcal{D} is **not that** easy to describe.

Characterization due to Stegenga '80: Condition involving the logarithmic capacity of their boundary values.

In particular

 $\{\text{multiplier of }\mathcal{D}\} \subsetneq \mathcal{D} \cap H^{\infty}.$

The multipliers of H^2 is H^{∞} , but the multipliers of \mathcal{D} is **not that** easy to describe.

Characterization due to Stegenga '80: Condition involving the logarithmic capacity of their boundary values.

In particular

 $\{\text{multiplier of }\mathcal{D}\} \subsetneq \mathcal{D} \cap H^{\infty}.$

Definition: μ is a **Carleson measure** for \mathcal{D} if \mathcal{D} injects continuously into $L^2(\mathbb{D}, \mu)$.

The multipliers of H^2 is H^{∞} , but the multipliers of \mathcal{D} is **not that** easy to describe.

Characterization due to Stegenga '80: Condition involving the logarithmic capacity of their boundary values.

In particular

 $\{\text{multiplier of }\mathcal{D}\} \subsetneq \mathcal{D} \cap H^{\infty}.$

Definition: μ is a **Carleson measure** for \mathcal{D} if \mathcal{D} injects continuously into $L^2(\mathbb{D}, \mu)$.

Therefore u is a multiplier for \mathcal{D} iff $d\mu(z) = |u'(z)|^2 dA(z)$ is a Carleson measure for \mathcal{D} .

Let $u(z) = (1 - z)^2$ and let φ be the infinite Blaschke product with zeroes $(1 - 1/n^2)_{n \ge 1}$.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Let $u(z) = (1-z)^2$ and let φ be the infinite Blaschke product with zeroes $(1-1/n^2)_{n\geq 1}$. Then $\varphi \notin D$, and thus C_{φ} is not bounded.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Let $u(z) = (1 - z)^2$ and let φ be the infinite Blaschke product with zeroes $(1 - 1/n^2)_{n \ge 1}$. Then $\varphi \notin \mathcal{D}$, and thus C_{φ} is not bounded. However, for $f \in \mathcal{D}$,

$$((1-z)^2(f\circ\varphi))'=-2(1-z)(f\circ\varphi)+(1-z)^2(f'\circ\varphi)\varphi'.$$

The first term is in \mathcal{B} ,

Let $u(z) = (1 - z)^2$ and let φ be the infinite Blaschke product with zeroes $(1 - 1/n^2)_{n \ge 1}$. Then $\varphi \notin \mathcal{D}$, and thus C_{φ} is not bounded. However, for $f \in \mathcal{D}$,

$$((1-z)^2(f\circ\varphi))'=-2(1-z)(f\circ\varphi)+(1-z)^2(f'\circ\varphi)\varphi'.$$

The first term is in \mathcal{B} , $(1-z)^2 \varphi'$ is bounded,

Let $u(z) = (1 - z)^2$ and let φ be the infinite Blaschke product with zeroes $(1 - 1/n^2)_{n \ge 1}$. Then $\varphi \notin \mathcal{D}$, and thus C_{φ} is not bounded. However, for $f \in \mathcal{D}$,

$$((1-z)^2(f\circ\varphi))'=-2(1-z)(f\circ\varphi)+(1-z)^2(f'\circ\varphi)\varphi'.$$

The first term is in \mathcal{B} , $(1-z)^2 \varphi'$ is bounded, $f' \circ \varphi$ is in \mathcal{B} .

Let $u(z) = (1 - z)^2$ and let φ be the infinite Blaschke product with zeroes $(1 - 1/n^2)_{n \ge 1}$. Then $\varphi \notin \mathcal{D}$, and thus C_{φ} is not bounded. However, for $f \in \mathcal{D}$,

$$((1-z)^2(f\circ\varphi))'=-2(1-z)(f\circ\varphi)+(1-z)^2(f'\circ\varphi)\varphi'.$$

The first term is in \mathcal{B} , $(1-z)^2 \varphi'$ is bounded, $f' \circ \varphi$ is in \mathcal{B} . Therefore $W_{u,\varphi}$ is bounded on \mathcal{D} ...and C_{φ} is **not**.

This is a stronger form of a result proved by Kac'nelson in 1972, and we use a similar proof.

Namely let $\Omega(z) = D^{-z}AD^z$ and use Phragmén-Lindelöf to show that $\|\Omega(z)\|$ attains its maximum on the imaginary axis.

Consequences for $H^2(\beta)$

Corollary 4: Let T be a bounded operator on H^2 given by a lower-triangular matrix with respect to the basis $(z^n)_{n\geq 0}$.

Take $(\beta_n)_{n\geq 0}$ positive and **decreasing** (e.g. Bergman space). Then T is bounded on $H^2(\beta)$ and

 $||T||_{H^2(\beta)} \le ||T||_{H^2}.$

Consequences for $H^2(\beta)$

Corollary 4: Let T be a bounded operator on H^2 given by a lower-triangular matrix with respect to the basis $(z^n)_{n\geq 0}$.

Take $(\beta_n)_{n\geq 0}$ positive and **decreasing** (e.g. Bergman space). Then T is bounded on $H^2(\beta)$ and

 $||T||_{H^2(\beta)} \le ||T||_{H^2}.$

Example: $W_{h,\varphi}$ where $\varphi(0) = 0$.

Consequences for $H^2(\beta)$

Corollary 4: Let T be a bounded operator on H^2 given by a lower-triangular matrix with respect to the basis $(z^n)_{n\geq 0}$.

Take $(\beta_n)_{n\geq 0}$ positive and **decreasing** (e.g. Bergman space). Then T is bounded on $H^2(\beta)$ and

 $||T||_{H^2(\beta)} \le ||T||_{H^2}.$

Example: $W_{h,\varphi}$ where $\varphi(0) = 0$.

Known special cases:

 C_{φ} (Cowen–MacCluer, using Hadamard–Schur products);

 T_h (can be deduced from Kac'nelson's lemma).

Slightly more generally...

We can treat the case $\varphi(0) = a$, not necessarily 0.

・ロト・日本・モト・モート ヨー うへで

Slightly more generally...

We can treat the case $\varphi(0) = a$, not necessarily 0.

Let

$$\psi(z)=\frac{a-z}{1-\overline{a}z},$$

・ロト・日本・モト・モート ヨー うへで

be an automorphism of the disc.

Slightly more generally...

We can treat the case $\varphi(0) = a$, not necessarily 0.

Let

$$\psi(z)=\frac{a-z}{1-\overline{a}z},$$

be an automorphism of the disc.

It is known that C_{ψ} is bounded (see Gallardo-Gutiérrez–Partington for recent norm estimates).

Compose with this to get the general result

$$\|W_{h,\varphi}\|_{H^2(\beta)} \leq \|C_{\psi}\|_{H^2(\beta)} \|W_{h,\varphi}\|_{H^2} \|C_{\psi}\|_{H^2}.$$

Corollary 5: Let T be a bounded operator on $H^2(\beta)$ given by a lower-triangular matrix with respect to the basis $(z^n)_{n\geq 0}$.

Take $(\beta_n)_{n\geq 0}$ positive and **increasing** (e.g. Dirichlet space).

Then T is bounded on H^2 and

 $\|T\|_{H^2} \leq \|T\|_{H^2(\beta)}.$

Paley–Wiener theorems

Recall that the Laplace transform

$$\mathcal{L}f(s) = \int_0^\infty f(t) e^{-st} \, dt$$

provides an isomorphism of $L^2(0,\infty)$ onto $H^2(\mathbb{C}_+)$, the Hardy space of the right half-plane, with

$$\|\mathcal{L}f\|_{H^2(\mathbb{C}_+)} = \sqrt{2\pi} \|f\|_2.$$

Paley–Wiener theorems

Recall that the Laplace transform

$$\mathcal{L}f(s) = \int_0^\infty f(t) e^{-st} \, dt$$

provides an isomorphism of $L^2(0,\infty)$ onto $H^2(\mathbb{C}_+)$, the Hardy space of the right half-plane, with

$$\|\mathcal{L}f\|_{H^2(\mathbb{C}_+)} = \sqrt{2\pi} \|f\|_2.$$

A wider class of spaces and isometric mappings was introduced by Zen Harper (2006), extended by Jacob–Partington–Pott (2013).

Let ν be a (not necessarily finite) positive Borel measure on $(0, \infty)$ with $\nu[0, 2x] \leq C\nu[0, x)$ for all x > 0.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

is finite. So $L^2(0,\infty)$ (= $L^2(0,\infty; dt)$ gives the Hardy space, $L^2(0,\infty; dt/t)$ gives the Bergman space, etc. The continuous analogue of a lower-triangular operator is a causal operator: one in which $L^2(\tau,\infty)$ is an invariant subspace for each $\tau > 0$.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

The continuous analogue of a lower-triangular operator is a causal operator: one in which $L^2(\tau,\infty)$ is an invariant subspace for each $\tau > 0$.

Theorem. If $A: L^2(0,\infty) \to L^2(0,\infty)$ is causal and bounded, then for every **decreasing** weight w it is bounded on $L^2(0,\infty; w(t) dt)$ with

$$\|A\|_{L^2(0,\infty;w(t)\,dt)} \le \|A\|_{L^2(0,\infty)}$$

If $\varphi:\mathbb{C}_+\to\mathbb{C}_+$ is analytic, then it has the Nevanlinna representation

$$\varphi(s) = as + ib + \int_{-\infty}^{\infty} \frac{1 - its}{s - it} d\mu(t),$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

with $a \geq 0$, $b \in \mathbb{R}$ and μ a measure of \mathbb{R} .

If $\varphi:\mathbb{C}_+\to\mathbb{C}_+$ is analytic, then it has the Nevanlinna representation

$$\varphi(s) = as + ib + \int_{-\infty}^{\infty} \frac{1 - its}{s - it} d\mu(t),$$

with $a \geq 0$, $b \in \mathbb{R}$ and μ a measure of \mathbb{R} .

However $C_{\varphi}: H^2(\mathbb{C}_+) \to H^2(\mathbb{C}_+)$ is not necessarily bounded (see later), unlike in the case of \mathbb{D} .

If $\varphi:\mathbb{C}_+\to\mathbb{C}_+$ is analytic, then it has the Nevanlinna representation

$$\varphi(s) = as + ib + \int_{-\infty}^{\infty} \frac{1 - its}{s - it} d\mu(t),$$

with $a \geq 0$, $b \in \mathbb{R}$ and μ a measure of \mathbb{R} .

However $C_{\varphi}: H^2(\mathbb{C}_+) \to H^2(\mathbb{C}_+)$ is not necessarily bounded (see later), unlike in the case of \mathbb{D} .

Now $W_{h,\varphi}$ will be causal if h is analytic and $a \ge 1$.

If $\varphi:\mathbb{C}_+\to\mathbb{C}_+$ is analytic, then it has the Nevanlinna representation

$$\varphi(s) = as + ib + \int_{-\infty}^{\infty} \frac{1 - its}{s - it} d\mu(t),$$

with $a \geq 0$, $b \in \mathbb{R}$ and μ a measure of \mathbb{R} .

However $C_{\varphi}: H^2(\mathbb{C}_+) \to H^2(\mathbb{C}_+)$ is not necessarily bounded (see later), unlike in the case of \mathbb{D} .

Now $W_{h,\varphi}$ will be causal if h is analytic and $a \ge 1$. For the non-causal case we can again compose with an automorphism to get a norm estimate.

The theorem for weighted composition operators

Theorem. Let $\varphi : \mathbb{C}_+ \to \mathbb{C}_+$ be analytic with a > 0 the number occurring in its Nevanlinna representation, and let $h : \mathbb{C}_+ \to \mathbb{C}$ be holomorphic such that $W_{h,\varphi}$ is bounded on $H^2(\mathbb{C}_+)$.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

The theorem for weighted composition operators

Theorem. Let $\varphi : \mathbb{C}_+ \to \mathbb{C}_+$ be analytic with a > 0 the number occurring in its Nevanlinna representation, and let $h : \mathbb{C}_+ \to \mathbb{C}$ be holomorphic such that $W_{h,\varphi}$ is bounded on $H^2(\mathbb{C}_+)$. Then $W_{h,\varphi}$ is also bounded on A^2_{ν} and

$$\|W_{h,\varphi}\|_{A^2_{\nu}} \leq \|C_{\psi}\|_{A^2_{\nu}} \|W_{h,\varphi}\|_{H^2(\mathbb{C}_+)} \|C_{\psi}^{-1}\|_{H^2(\mathbb{C}_+)},$$

where $\psi(s) = as$.

Elliott–Jury (2012): C_{φ} is bounded on $H^2(\mathbb{C}_+)$ if and only if

n.t.lim $_{z\to\infty}\varphi(z)=\infty$,

and

$$\lambda := \mathsf{n.t.lim}_{z \to \infty} z / \varphi(z)$$

exists (angular derivative at ∞) with $0 < \lambda < \infty$.

Elliott–Jury (2012): C_{φ} is bounded on $H^2(\mathbb{C}_+)$ if and only if

n.t.lim $_{z\to\infty}\varphi(z)=\infty$,

and

$$\lambda := \mathsf{n.t.lim}_{z o \infty} z / \varphi(z)$$

exists (angular derivative at ∞) with 0 < λ < ∞ . Then

$$\|C_{\varphi}\| = \sqrt{\lambda}.$$

Elliott–Jury (2012): C_{φ} is bounded on $H^2(\mathbb{C}_+)$ if and only if

n.t.lim $_{z\to\infty}\varphi(z)=\infty$,

and

$$\lambda := \mathsf{n.t.lim}_{z o \infty} z / \varphi(z)$$

exists (angular derivative at ∞) with 0 < λ < ∞ . Then

$$\|C_{\varphi}\| = \sqrt{\lambda}.$$

For weighted Bergman spaces (Zen spaces with $d\nu(x) = x^{\alpha} dx$ and $\alpha > -1$) a similar result holds (Elliott–Wynn, 2011), with

$$\|\mathcal{C}_{\varphi}\|_{\mathcal{A}^2_{\nu}} = \lambda^{(2+\alpha)/2}.$$

Elliott–Jury (2012): C_{φ} is bounded on $H^2(\mathbb{C}_+)$ if and only if

 $\operatorname{n.t.lim}_{z\to\infty}\varphi(z)=\infty,$

and

$$\lambda := \mathsf{n.t.lim}_{z \to \infty} z / \varphi(z)$$

exists (angular derivative at ∞) with 0 < λ < ∞ . Then

$$\|C_{\varphi}\| = \sqrt{\lambda}.$$

For weighted Bergman spaces (Zen spaces with $d\nu(x) = x^{\alpha} dx$ and $\alpha > -1$) a similar result holds (Elliott–Wynn, 2011), with

$$\|\mathcal{C}_{\varphi}\|_{\mathcal{A}^2_{\nu}} = \lambda^{(2+\alpha)/2}.$$

Now for causality $0 < \lambda \leq 1$ and, as expected, $\|C_{\varphi}\|_{\mathcal{A}^2_{\mathcal{U}}} \leq \|C_{\varphi}\|_{H^2}$.

CONCRETE OPERATORS

is devoted to all special classes of linear operators acting on function spaces (e.g. Perron-Frobenius operators, multiplication operators, operators in reproducing Kernel Hilbert spaces, weighted composition operators, integral operators, kernel operators, Toeplitz operators, Hankel operators, Wiener-Hopf operators, Jacobi operators, weighted shift operators, operators on function spaces)
